Financial foresight for students

Beidemariam Shumet
Impact X 2026

budgetly.finance

Today’s balance can hide tomorrow’s shortfall

62%

of surveyed students rely on two or more sources to pay for school.

Money arrives unevenly. Expenses keep coming.

A purchase that fits today’s balance can reduce the money available for next term’s tuition or rent.

Source: RBC-commissioned Canadian student survey, May 2026.

Budgetly makes the next decision visible

01

Build a financial baseline

Enter tuition, living costs, savings and expected funding.

02

See the semesters ahead

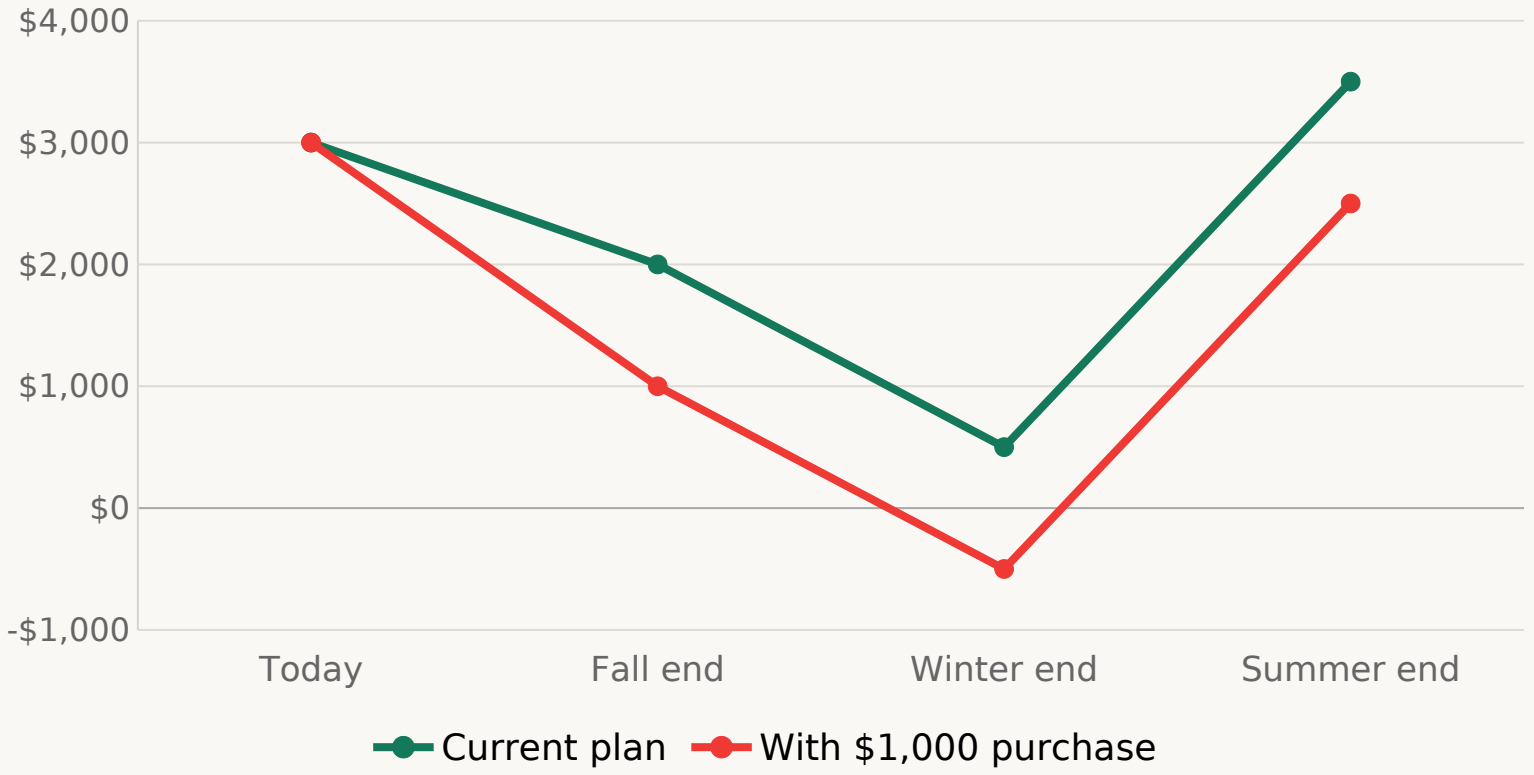

Identify projected shortfalls and the balance at graduation.

03

Compare a decision before committing

Model a purchase or a change in expenses and income.

A $1,000 purchase can change next term

−$500

Projected winter balance
after the purchase

The cost is clear.
The timing matters.

Illustrative scenario in CAD. Term-end balances based on assumed cash flows, not actual user results.

A focused starting market

Fredericton first

Students balancing tuition and rent with changing sources of income.

Proposed entry point: student groups and financial wellness workshops at STU and UNB.

2.3M

public postsecondary enrolments in Canada 2024/25

Source: Statistics Canada, October 1, 2026. Enrolments are program counts, not unique customers.

Easier planning for student decisions

Alternative	What students get	Budgetly’s intended advantage
Bank balance check	An immediate cash snapshot	A view of future semesters
DIY spreadsheet	Flexible forecasting with setup	A guided student workflow
General budgeting app	Features vary by product	Focus on tuition and term planning

Validation test: can students identify a risky semester and compare a purchase without help?

Early traction, with the next test defined

14

signups

Founder-reported, October 2026

Next: test real decisions

Invite every signup to a guided session.

Observe a forecast and a what-if comparison.

Track return use after 30 days.

Signups do not establish active usage, retention or financial outcomes.

A proposed model for affordable access

Free core planning for students

Proposed institutional revenue

Campus-funded programmes could support onboarding, workshops and access.

Commercial test: interview 5 campus decision-makers and seek one paid pilot proposal.

Business-model hypothesis. Pricing, willingness to pay and delivery costs remain unvalidated.

A 90-day pilot plan

01

Days 1–30: learn from the first 14

Invite the existing cohort. Observe use. Fix the main barriers.

02

Days 31–60: recruit a campus pilot

Target 50 participants through workshops and student outreach.

03

Days 61–90: measure useful repeat use

Target 30 activated participants and 15 returning within 30 days.

Proposed targets. Activation means completing a baseline forecast and one scenario.

The impact is earlier action on financial gaps

Intended outcome	How the pilot would measure it
Earlier awareness	Time between recognising a gap and the expected shortfall
Better-informed choices	Follow-up reports of changed purchase or spending decisions
Fewer financial surprises	Missed essential payments at baseline and term-end

A planning tool can reveal a funding gap. It cannot create the missing income.

Impact hypotheses. Use participant consent and report sample size, attrition and limitations.

Built by a student who knows the problem

Beidemariam Shumet

Economics student and Budgetly founder
Accounting coursework, JavaScript and product design

The Impact X ask

Mentorship and campus introductions to run the first measured pilot.

Proposed use of any award

50% Product reliability and accessibility
30% Student testing
20% Campus pilot outreach

“The biggest business you’re gonna have to manage is your life.”

Nipsey Hussle, sharing advice from Rick Ross

Budgetly helps students plan theirs.
